

provided with the candidate kit if necessary for 1988 through 1990 model year engines, are the original programs developed by DDC for 1991 through 1993 engines. As discussed in the **Federal Register** notice describing the certification of the Engelhard ETX 2002 rebuild kit (63 FR 50225; September 21, 1998), EPA expressed concern with programs designed to decrease fuel consumption during driving modes not substantially included in the federal test procedure, that have the effect of substantially increasing NOx during these modes. Prior to certification of the candidate kit, EPA expects these concerns to be addressed.

If EPA certifies the candidate application to the 0.10 g/bhp-hr PM standard, then urban bus operators who choose to comply with compliance Option 1 of this program may use this equipment, or other equipment certified to the 0.10 g/bhp-hr standard, when applicable engines are rebuilt or replaced. Further, operators who chose to comply under compliance Option 2 of this program may also use the Engelhard equipment. They would claim the PM certification level for the kit when calculating their fleet level attained.

The date of today's notice initiates a 45-day period during which EPA will accept written comments relevant to whether or not the equipment described in the Engelhard application should be certified. Interested parties are encouraged to review this application, and provide comments related to whether or not the equipment described in it should be certified pursuant to the urban bus retrofit/rebuild program. Comments should be provided in writing to the address listed under the Addresses section of this document.

EPA will review this application of intent to certify, along with comments received from the interested parties, and attempt to resolve or clarify issues as necessary. During the review process, EPA may add additional documents to the docket as a result of the review process. These documents will also be available for public review and comment.
